The configurations

A modular offer:

The caller unit

Sited at the gate or front door, this is the outside unit with which visitors announce and identify themselves. The caller unit exists in one or two button versions, and is also available with a keypad. Every caller unit has a ruggedised anti-vandal version.

The controller

Connected to the outdoor unit to which it supplies power and for which it makes radio communications. It directly controls any 12 V latch or an electric lock and, depending upon the doorphone model can also control and supervise a motor driven gate or door.

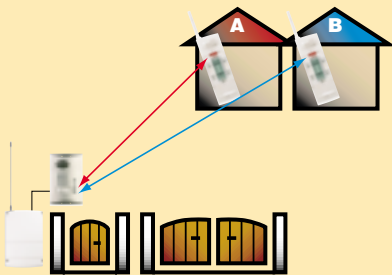

The interior handset unit

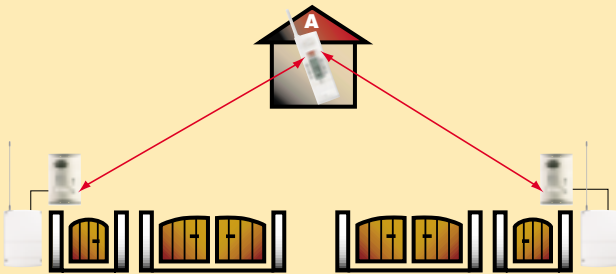

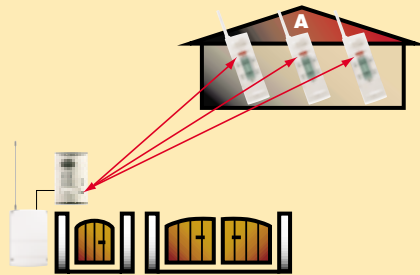

Allows the user to identify and welcome visitors, to control the opening of doors and gates, and to verify their status, open or closed on the LCD display. It is composed of a cordless handset and a base unit. The handset is available in three versions (1, 3 & 7 function).

Typical applications:

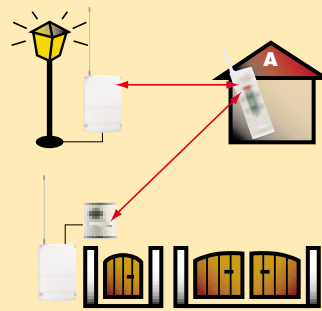

2-way intercom + door/gate control for 2 premises

Multi-handset 2-way intercom and door/gate control

2-way intercom + 2 sets of door/gate controls

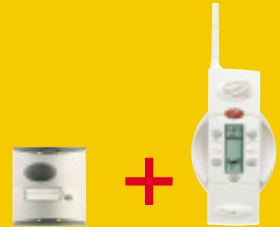

2-way intercom + door/gate control and lighting control

Your intercom as you want it

Interchangeable handset inserts are available in different colours.
