

SK401-E

External

Stand-Alone Keypad & Proximity Card Reader

User Manual

INTRODUCTION

The SK401-E is a two relay multifunction standalone access control keypad suitable for either indoor or outdoor use. It is housed in a strong, sturdy and vandal resistant Zinc Alloy electroplated case. The electronics are fully potted making it extremely weather resistant and conforming to IP66

It supports up to 1100 users in a Card, PIN, or a Card + PIN option. The inbuilt card reader supports 125KHZ EM frequency card or key fob, and the Pin length is 4-6 digits

Both relays can operate in Pulse Mode (suitable for access control) or Toggle Mode (suitable for arming/disarming alarms, switching lights, machines.....etc)

The SK401-E has many extra features including block enrollment, anti-tamper alarm & backlit keypad buttons. These features make the SK401-E an ideal choice for door access not only for small shops and domestic households but also for commercial and industrial applications such as factories, warehouses, laboratories, banks and prisons

Features

- Weather resistant to IP66
- Strong Zinc Alloy Electroplated anti-vandal case – Vandal resistant
- Backlit Keypad buttons
- Two LED status display
- Two Programmable Relay Outputs
- **Relay 1:** Up to 1000 Pin & Card holders, **Relay 2:** Up to 100 Pin & Card holders
- Card Block enrollment
- Integrated Alarm Buzzer & Output
- Low power consumption (55mA)
- Anti-Tamper Alarm
- Latch Mode/Toggle Mode
- Relay 2 Can Support Door Bell Feature
- 12-28V DC/12-18V AC Power Input (**Cards/fobs will not work on AC power**)
- 850mm cable tail

Specifications:

User Capacity Relay 1 Relay 2	1100 Cards/PINS 1000 100
Operating Voltage Idle Current Active Current	12-28V DC / 12-18V AC 55mA 80mA
Keypad	12 Key (2*6)
Proximity Card Reader Radio Technology Read Range	EM 125KHz Industry Standard Proximity Card 20mm – 35mm
Wiring Connections	Electric Lock, Exit Button, DOTL, External Alarm, Door Bell
Relay Adjustable Relay Output Time Adjustable Alarm Output Time Lock Output Load Alarm Output Load	Two (NO, NC, COM) 1-99 Seconds (5 seconds default) 1-3 minutes (1 minute default) 3 Amp Maximum 3 Amp Maximum
Environment Operating Temperature Operating Humidity	IP66 -30°C - 60°C, or -22°F - 140°F 10% - 90% Non-Condensing
Physical Surface Finish Dimensions Unit Weight	Zinc-Alloy Enclosure Powder Coat H:129 x W:55 x D:22 (mm) 470g

Package contents

SK401-E Keypad

Diode IN4004 (For relay circuit protection)

Self Tapping Screws

Wall Anchors

Screw Driver

Manager Add Card

Manager Delete Card

&

INSTALLATION

- Remove the back cover from the unit
- Drill 2 holes (A,C) on the wall for the screws and one hole for the cable
- Knock the supplied rubber bungs to the screw holes (A,C)
- Fix the back cover firmly on the wall with 4 flat head screws
- Thread the cable through the cable hole (B)
- Attach the unit to the back cover

Wiring cable

Wire Insulation Colour	Function	Notes
Red	AC & DC	12-28V DC / 12-18V AC Regulated Power Input
Black	AC & DC	12-28V DC / 12-18V AC Regulated Power Input
Grey & Black	GND	Negative Pole
Blue	NO1	Normally Open Relay 1 output
White	COM1	Common Connection for Relay 1 Output
Green	NC1	Normally Closed Relay 1 Output
Yellow	OPEN1	Request to Exit input 1
Advanced Input and Output Features – Relay 2		
Blue & Black	NO2	Normally Open Relay 2 Output
White & Black	COM2	Common Connection for Relay 2 Output
Green & Black	NC2	Normally Closed Relay 2 Output
Yellow & Black	OPEN2	Request to Exit input 2
Grey	Alarm -	Alarm Negative
Brown	D_IN	Door Status Detecting

Connection Diagram Examples

Common power supply for magnetic lock (Fail open – power to lock)

Common power supply for lock release (Fail secure – power to unlock)

Common power supply for auto gate controller (using Normally Open contact)

Comments: Relay 2 can be used to operate a doorbell if there is no need to operate a second door. The wiring to connect the doorbell is via NO2 and COM2. Press #, the SK401-E will send out a switching signal to the doorbell, as long as you press the " # ", the doorbell will operate, it will stop when you release the " # "

Function Description

Relay operation (Pulse mode and Toggle mode)

Both relays can operate in Pulse Mode (suitable for access control) or Toggle Mode (suitable for arming/disarming alarms, switching lights, machines....etc)

Every time a valid card/fob is presented or a Pin input is made in Pulse Mode, the relay will operate, for the pre-set relay pulse time

Every time a valid card/fob is presented or a Pin input is made in Toggle Mode, the relay changes state, which will not revert until a valid card/fob is re-presented or a Pin input is re-made

Master Card

The SK401-E can use Master Cards to program user cards/fobs into and out of the system. There are two pre-programmed Master Cards (an Add Card, and a Delete Card) to allow rapid card enrollment. They are for Relay 1 only

Anti Tamper Alarm – Please the last page for this

The SK401-E uses an LDR (light Dependent Resistor) as an anti tamper alarm. If the keypad facia is removed, or a sudden change in light source, the tamper alarm will bleep constantly

PROGRAMMING

Configure the Keypad

Change the configure settings according to your application (optional). Multiple configuration settings can be changed at one time: Enter program mode, change the desired settings, then exit program mode

Set Master Code

The 6 digit Master Code is used to prevent unauthorized access to the system. To interface with the SK401-E, the administrator will need a Master Code (**Factory default code: 666666**). We recommend immediate update and recording of your Master Code

Programming Step	Keystroke Combination
1. Enter Program Mode	* (Master Code) #
2. Update Master Code	0 (<i>New Master Code</i>) # (<i>Repeat New Master Code</i>) #
3. Exit Program Mode	*

SET ACCESS CONFIGURATION

- **Card or PIN (Default):** The User must present a valid card/fob to the SK401-E or enter their PIN code followed by the # key, in order to be granted access
- **Card + PIN:** The User must first present a valid card/fob to the SK401-E and then enter their PIN code followed by the # key, in order to be granted access

Programming Step	Keystroke Combination
1. Enter Program Mode	* (Master Code) #
2. Card or PIN Relay 1 Relay 2	(Default) 4 1 0 # 4 2 0 #
3. Card + PIN Relay 1 Relay 2	4 1 1 # 4 2 1 #
4. Exit Program Mode	*

User Settings

To enter the programming mode	* [Master code] #
To exit from the programming mode	*
Note that to undertake the following programming, the Master PIN must be entered	
Note: When adding users, if the card/fob or Pin user has been enrolled already, you cannot add it again on the same relay, or the device will give a bleep as an error. It is ok to enroll the same card/fob or PIN for both relay outputs	

Factory default setting: Card or PIN mode	
To set users for Relay 1. 4 1 0 #	
To add PIN users	1 [User ID number] # [PIN] # The ID number is any number from 1-1000 The PIN is any 4-6 digits between 0000-999999 with the exception of 1234 which is reserved. Users can be added continuously without exiting programming mode as follows: 1 [User ID no 1] # [PIN] # [User ID no 2] # [PIN] #
To delete PIN users	3 [User ID number] # Users can be deleted continuously without exiting programming mode
To change the PIN of a PIN user (Note: This step must be done out of programming mode)	* [ID number] # [Old PIN] # [New PIN] # [Repeat new PIN] #

To add Card Users. (Method 1) This is an easy way to enter cards with auto-generated ID numbers The ID number will start from 1 if no user has been programmed	1 Read card # Cards can be added continuously without exiting programming mode
To add Card Users. (Method 2) This is the alternative way to enter cards using User ID Allocation. In this method a User ID is allocated to a card. Only one user ID can be allocated to a single card	1 ID number # Card # The ID number can be any number from 1-1000
To add a series of cards users – Block Enrolment The card number must be consecutive (This operation is only for relay 1)	2 ID number # 8 digits or 10 digits Card number # Card quantity # Card quantity is between 1-1000
To delete Card users by cards Note: Users can be deleted continuously without exiting programming mode	3 Read Card # The device can automatically identify the card of relay 1 or relay 2
To delete Card users by user ID This option can be used when a user has lost their card	3 Enter the User ID #
To delete card users by card number	9 Input 8 digits or 10 digits Card number # Cards can be deleted continuously without exiting from programming mode
To set users for Relay 2. 4 2 0 #	
To set Pin user for relay 2 is the same as relay 1, accept the ID number is 1001-1100 for relay 2 To set Card user for relay 2 is the same as relay 1, with the exception of adding Card users with auto-generated ID numbers and Block enrolment as below	
To add Card Users. (Method 1) Auto-generated ID numbers	2 Read Card # Card can be added continuously without exiting programming mode

Card and PIN Mode	
To set users for relay 1. 4 1 1 #	
To Add a card and Pin user (The PIN is any four-six digits between 0000 & 999999 with the exception of 1234 which is reserved.)	Add the card as for a card user Press * to exit from the programming mode Then allocate the card a PIN as follows: * Read card 1234 # PIN # PIN #
To change a PIN in card and PIN mode (Method 1) Note that this is done outside programming mode so the user can undertake this themselves	* Read Card Old PIN # New PIN # New PIN #
To change a PIN in card and PIN mode (Method 2) Note that this is done outside programming mode so the user can undertake this themselves	* ID number # Old PIN # New PIN # New PIN #
To delete a Card and PIN user just delete the card	3 Read Card # or 3 User ID #
To set users for relay 2. 4 2 1 # The operation is the same as relay 1	

To set Card user only. (in this mode, users can only be valid by card or fob)	
To set Card user only	4 1 2 # Relay 1 4 2 2 # Relay 2 Entry is by Card/fob only

Relay Setting (Pulse mode, Toggle mode)

Pulse mode (Factory default)

Pulse mode - Door relay time setting	For Relay 1: 5 1 1-99 # For Relay 2: 5 2 1-99 # The door relay time is between 1-99 seconds, the factory default setting is 5 seconds. 1 means relay 1, 2 means relay 2
--------------------------------------	---

Toggle mode

Toggle mode	For Relay 1: 5 1 0 # For Relay 2: 5 2 0 #
-------------	--

Door, Alarm, Acoustic Signal, Door Bell Settings

Door Open Detection

Door Open Too Long (DOTL) warning. When used with an optional magnetic contact or built-in magnetic contact of the lock, if the door is opened normally, but not closed after 1 minute, the internal buzzer will bleep automatically to remind people to close the door and continue for 1 minute before switching off automatically

Door Forced Open warning. When used with an optional magnetic contact or built-in magnetic contact of the lock, if the door is forced open, the internal buzzer and alarm output will both operate

To disable door open detection	6 0 # <i>(Default)</i>
--------------------------------	---

To enable door open detection	6 1 #
-------------------------------	----------------------------

It is optional to connect the D_IN line to LOCK1 or LOCK 2

Keypad Lockout & Alarm Output options. If there are 10 invalid cards or 10 incorrect PIN numbers in a 10 minute period either the keypad will lockout for 10 minutes or the alarm will operate for 10 minutes, depending on the option selected below

Normal status: No keypad lockout or alarm	7 0 # <i>(Default)</i>
---	---

Keypad Lockout	7 1 #
----------------	----------------------------

Alarm Output	7 2 #
--------------	----------------------------

Alarm output time

To set the alarm output time	8 1-3 # <i>(Default is 1 minute)</i> (1-3 minutes available)
------------------------------	--

Acoustic Signal

The acoustic signal can be set on or off. When on, the keypad will bleep when the key buttons are pressed, when off, the keypad will be in silent

Normal status: On	8 6 # <i>(Default)</i>
-------------------	---

Acoustic signal Off	8 7 #
---------------------	----------------------------

Change Relay 2 to Door Bell

(When there is no need to operate a second door, relay 2 can be set to operate as a door bell. The wiring is connecting the door bell to COM2 and NO2. Press #, and the keypad will send the signal to the door bell

Relay 2	8 8 # <i>(Default)</i>
---------	---

Door bell	8 9 #
-----------	----------------------------

To remove The Alarm

To reset the Door Forced Open warning	Read valid card or Master Code #
---------------------------------------	--

To reset the Door Open Too Long warning	Close the door or Read valid card or Master Code #
---	--

Others

Using Master Cards

Using Master Card (It is only available for relay 1)	
Add a User Card	1. (Read Master Add Card) 2. (Read User Card) <i>Repeat Step 2 for additional user cards</i> 3. (Read Master Add Card)
Delete a User Card	1. (Read Master Delete Card) 2. (Read User Card) <i>Repeat Step 2 for additional user cards</i> 3. (Read Master Delete Card)

Reset to Factory Default:

This will reset the SK401-E to the factory default but **all card/PIN information will still be retained**

This procedure will also require reprogramming of the Master Add and Delete Cards

NOTE: *This is also useful if the original Master Add and Delete Cards have been lost*

1. Power down the SK401-E
2. Press the * (Star) button and hold, at the same time power up the keypad
3. Release the button until both LED's shine

(Parts 4 & 5 must be undertaken within 10 seconds)

4. Present any 125KHz proximity EM card or the Master Add Card (provided) to the SK401-E. This card is now the Master Add Card
5. Present any 125KHz proximity EM card or the Master Delete Card (provided) to the SK401-E. This card is now the Master Delete Card

Erase all Users **

This will delete ALL User data for relay 1 or relay 2 as per below

1. Enter Program Mode: *(Master Code)#
2. Enter 30000# (for relay 1) Or 90000 # (for relay 2)
3. Exit: *

****All configuration data is retained**

SK401-E - Simplified Instruction

Function Description	Operation
Enter the Programming Mode	* (Master Code) # <i>(666666 is the default factory master code)</i>
Change the Master Code	0 (New Master Code) # (Repeat New Master Code) # <i>(code: 4-6 digits)</i>
Add Card User	1 (Read Card) # (for relay 1) 2 (Read Card) # (for relay 2)
Add PIN User	1 (User ID 1-1000) # (PIN)# (for relay 1) 1 (User ID 1001-1100) # (PIN)# (for relay 2) <i>The PIN is any 4-6 digits between 0000 - 999999</i>
Delete User	3 (Read Card) # 3 (User ID) #
Exit	*
How to be granted access	
Card User	Present card/fob
PIN User	Enter (PIN) #

Anti Tamper Alarm

The SK401-E's alarm trigger is activated by an LDR (Light Dependant Resistor) which is located to the lower side of the unit as illustrated below using the K401-E

The alarm function is designed as an 'Anti-Theft' facility. Forceful removal of the installed keypad or a sudden change in light source will trigger the keypad to bleep constantly. The keypad will also be "Blocked" from use

The function cannot be disabled but it can be stopped by presenting a valid card or key fob to the reader or entering the Master Code followed by the # sign

Alternatively, you can prevent the alarm from future activation by covering the LDR with a non-light absorbent substance in addition to sealing around all edges of the keypad
